Flower Shop Management System

Welcome! Blooms are nature’s vibrant burst of color, each one a little moment of beauty. Whether in a garden or a bouquet, they brighten up spaces and lift spirits, reminding us of life’s simple joys.

  3. CSE23360 chandana

Introduction

Welcome to our presentation on the Flower Shop Management System. Our team has developed this system to make running a flower shop easier and more efficient.

Problem

Managing a flower shop can be challenging. Keeping track of inventory, processing orders, and handling customer information can be messy and time-consuming.

Solution

Our system helps solve these problems by automating many tasks. It keeps track of what flowers are in stock, processes customer orders, and manages customer data—all in one place.

Objectives

Make Flower Shops More Efficient

Our system helps flower shops manage their products and orders easily, saving time and reducing mistakes.

Improve Customer Experience

We want customers to have a smooth and pleasant shopping experience when buying flowers online.

Simplify Shop Management

The system makes it easy for shop owners to keep track of their inventory, orders, and customers all in one place.

Support Business Growth

By streamlining operations, the system helps flower shops grow and serve more customers.

Key features of the system

1

User Registration and Login

Users can create an account by registering with their details, like name, email, and password. Once registered, they can log in to access their account.

2

Design

The website is designed to look good on different devices, such as smartphones, tablets, and desktops. The layout adjusts automatically to fit the screen size.

3

Product Listings and Offers

The system can display various products (like flowers) along with special offers. These are presented in visually appealing sections, making it easy for customers to browse.

4

Navigation Menu

A clear and simple menu allows users to easily navigate the website. The menu items highlight when hovered over, improving user experience.

5

Shopping Cart

Users can add products to their shopping cart, view item details, and see the total price before proceeding to checkout.

6

Contact and Branch Information

The website includes sections for users to find contact information and details about different branches, with location maps integrated.

System Architecture

Frontend (User Interface)

- HTML/CSS
  This is what the user sees and interacts with on the website, like the home, products, contact, about, login and registration pages. It includes the design, buttons, forms, and layout.

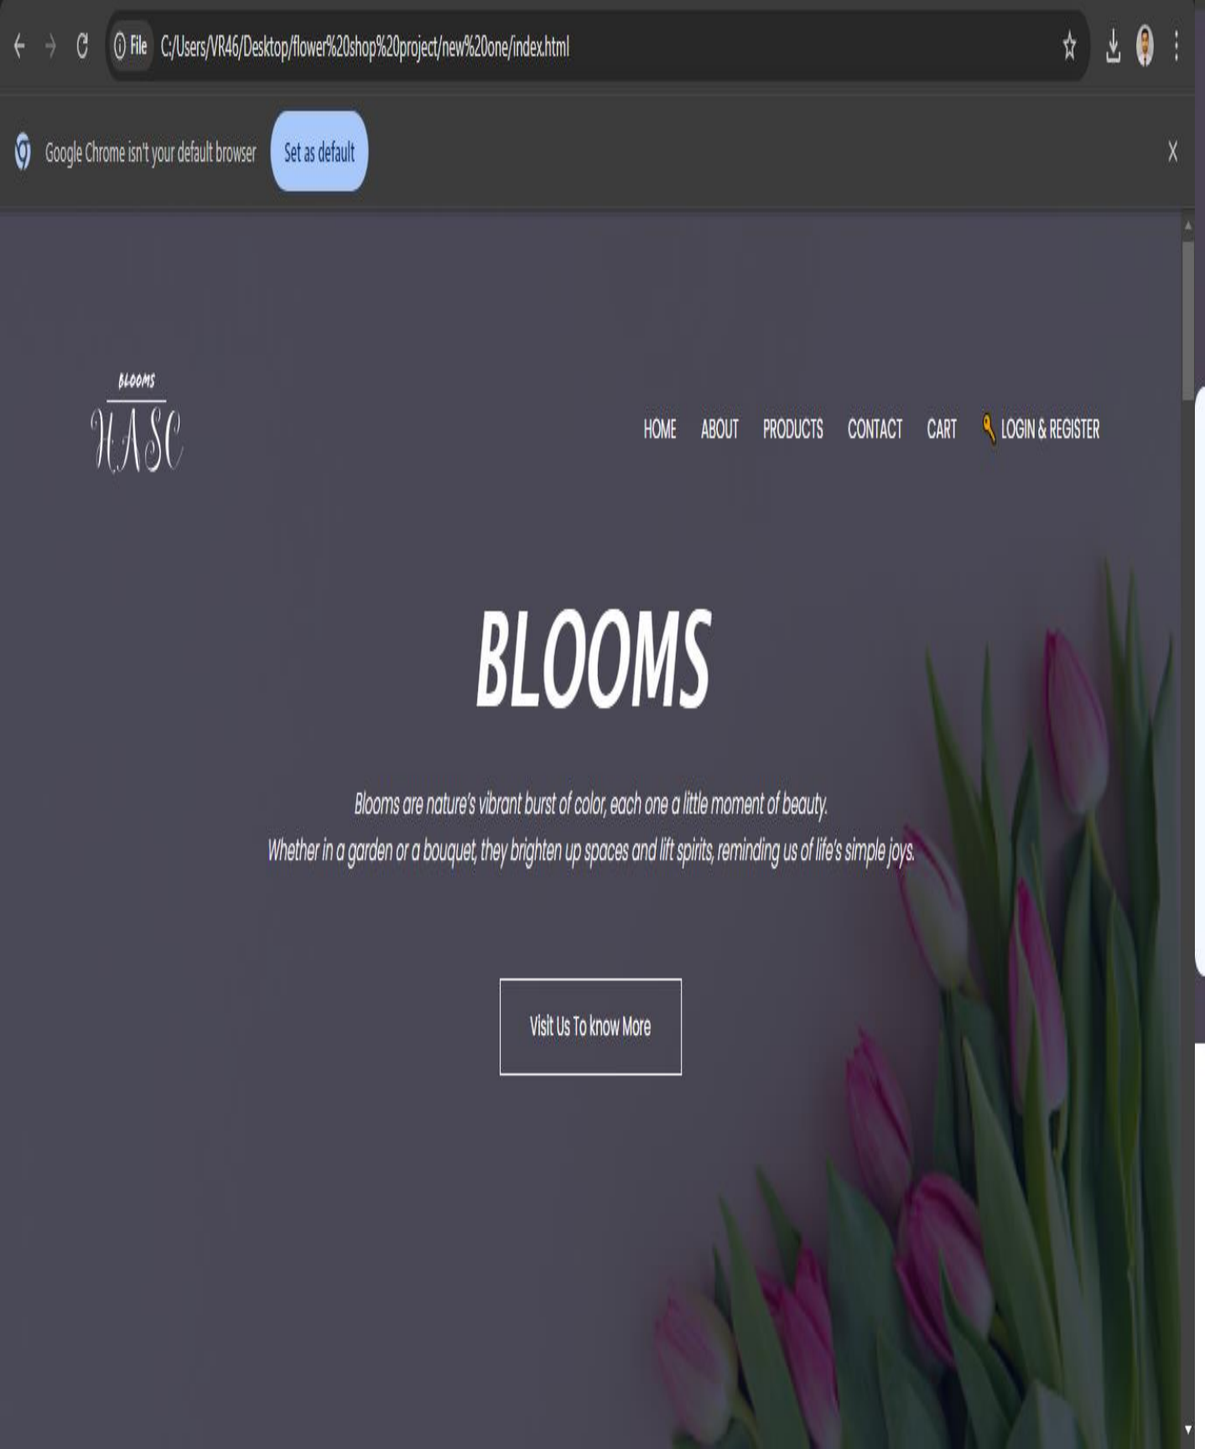

- JavaScript (optional if included)
  This could handle any interactive features on the website, like validating forms or handling user actions.

Backend (Server-Side)

- PHP
  This is the engine behind the scenes. It processes the user's requests, like logging in or registering, and interacts with the database to store or retrieve information.

Database

- MySQL
  The database stores all the essential information, such as user details (like usernames and passwords), product listings, and customer orders. The backend (PHP) connects with this database to fetch and update data as needed.

Our Products

Blooms Hase transforms your flower shop into a thriving business by streamlining operations, enhancing customer experiences, and nurturing growth with ease.

Fresh Flowers

Our fresh flowers are handpicked from trusted growers to guarantee the highest quality and freshness. We source our blooms daily, ensuring that every petal is vibrant, fragrant, and long-lasting. Whether you're looking for seasonal flowers, exotic varieties, or classic favorites, we provide a diverse selection that caters to all tastes and preferences.

Flower Decorations

Blooms Hase excels in creating bespoke flower decorations that transform any event or space into a stunning visual experience. Our expert floral designers work closely with you to craft unique arrangements that perfectly capture the theme and mood of your occasion.

Flower Bouquets

Our flower bouquets are expertly crafted to convey your sentiments and enhance any occasion. From romantic roses and cheerful sunflowers to sophisticated mixed arrangements, we offer a diverse selection of bouquets tailored to your needs.

Our Product Items

Blooms Hase transforms your flower shop into a thriving business by streamlining operations, enhancing customer experiences, and nurturing growth

What Our Customers Says

Blooms Hase transforms your flower shop into a thriving business by streamlining operations, enhancing customer experiences, and nurturing growth with ease.

"I was thrilled with the selection of flowers available on this site. I found the perfect arrangement for my wedding anniversary, and the delivery was prompt and professional. The flowers were stunning and exceeded my expectations. Highly recommend!"

Christine Berkley

★★★★☆

"I recently ordered a bouquet for my friend's birthday, and the experience was fantastic. The website was easy to navigate, and my order arrived right on time. The flowers were fresh and beautifully arranged. I'll definitely be coming back for more!"

John Carter

About Us

we're passionate about helping florists thrive. Our flower shop management system is designed to make running your business easier, so you can focus on crafting beautiful arrangements. We believe in simplicity, efficiency, and supporting the creativity that makes every bouquet special.

DEVELOPMENT PROCESS

Development Process is done by using following technologies

1

Web page design

Structure of the web page was completely developed using HTML,JAVASCRIPT and CSS

2

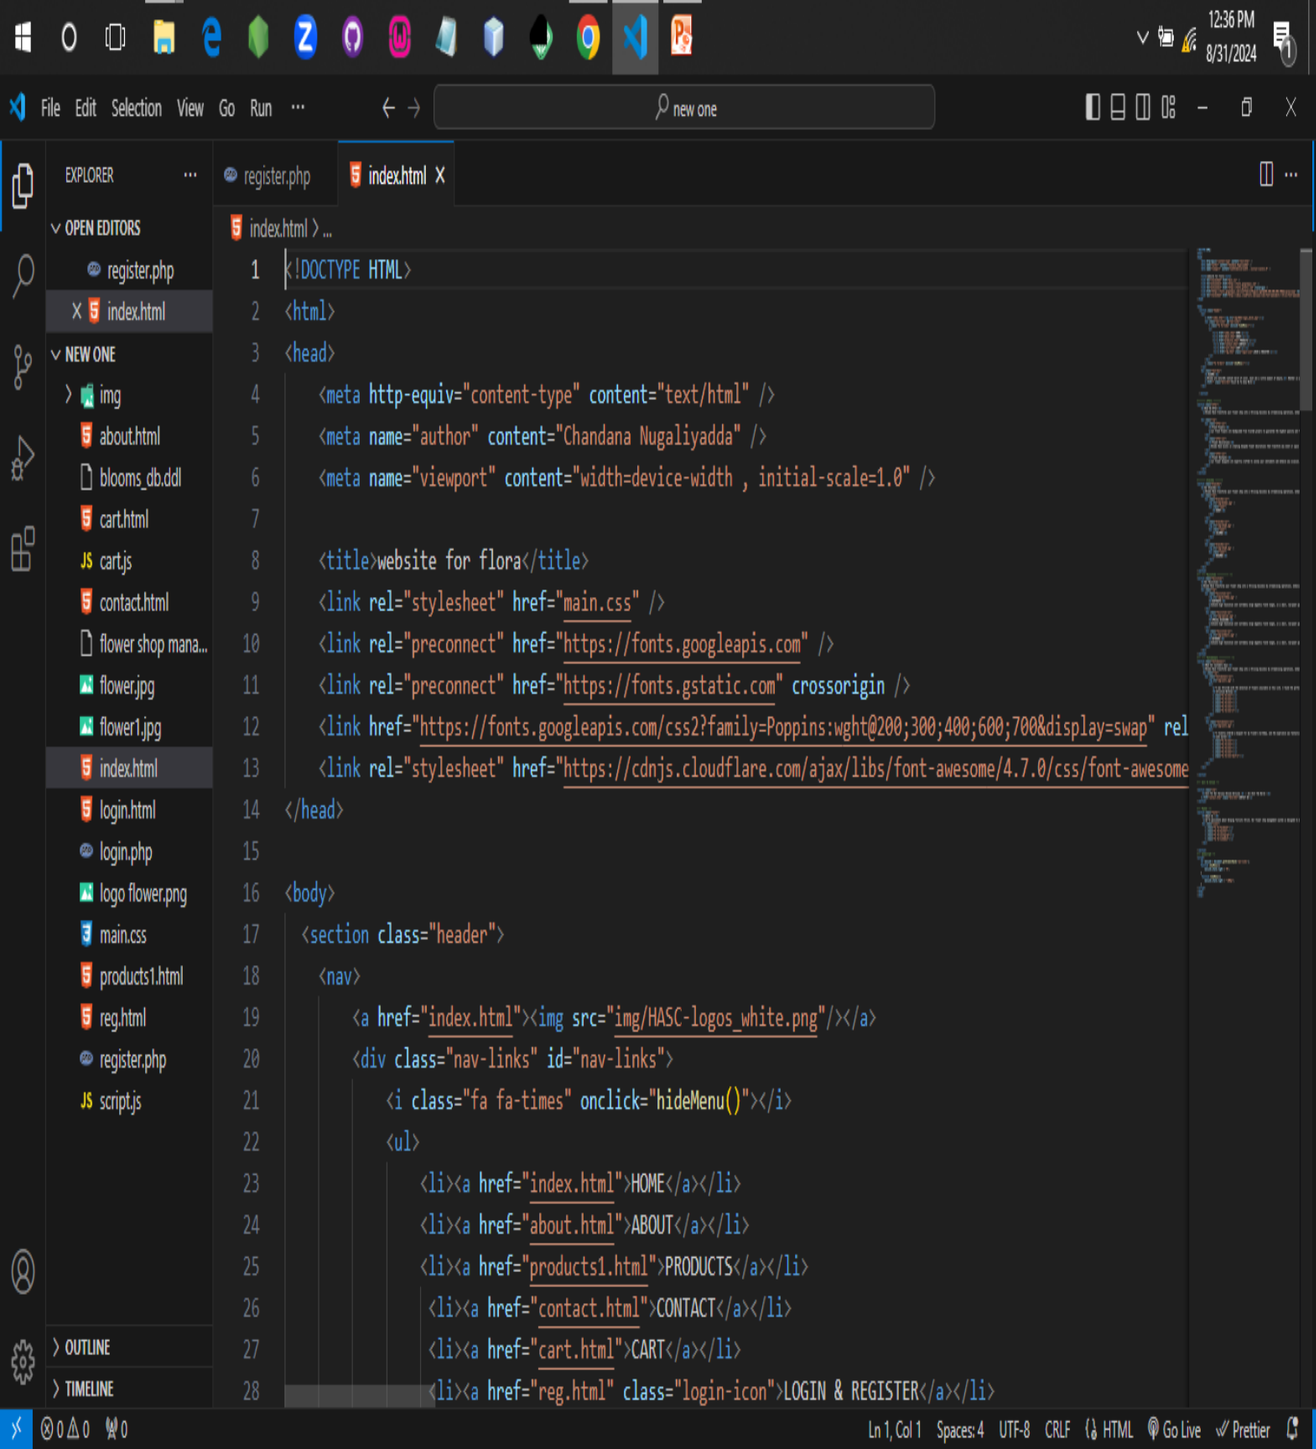

Register and login details

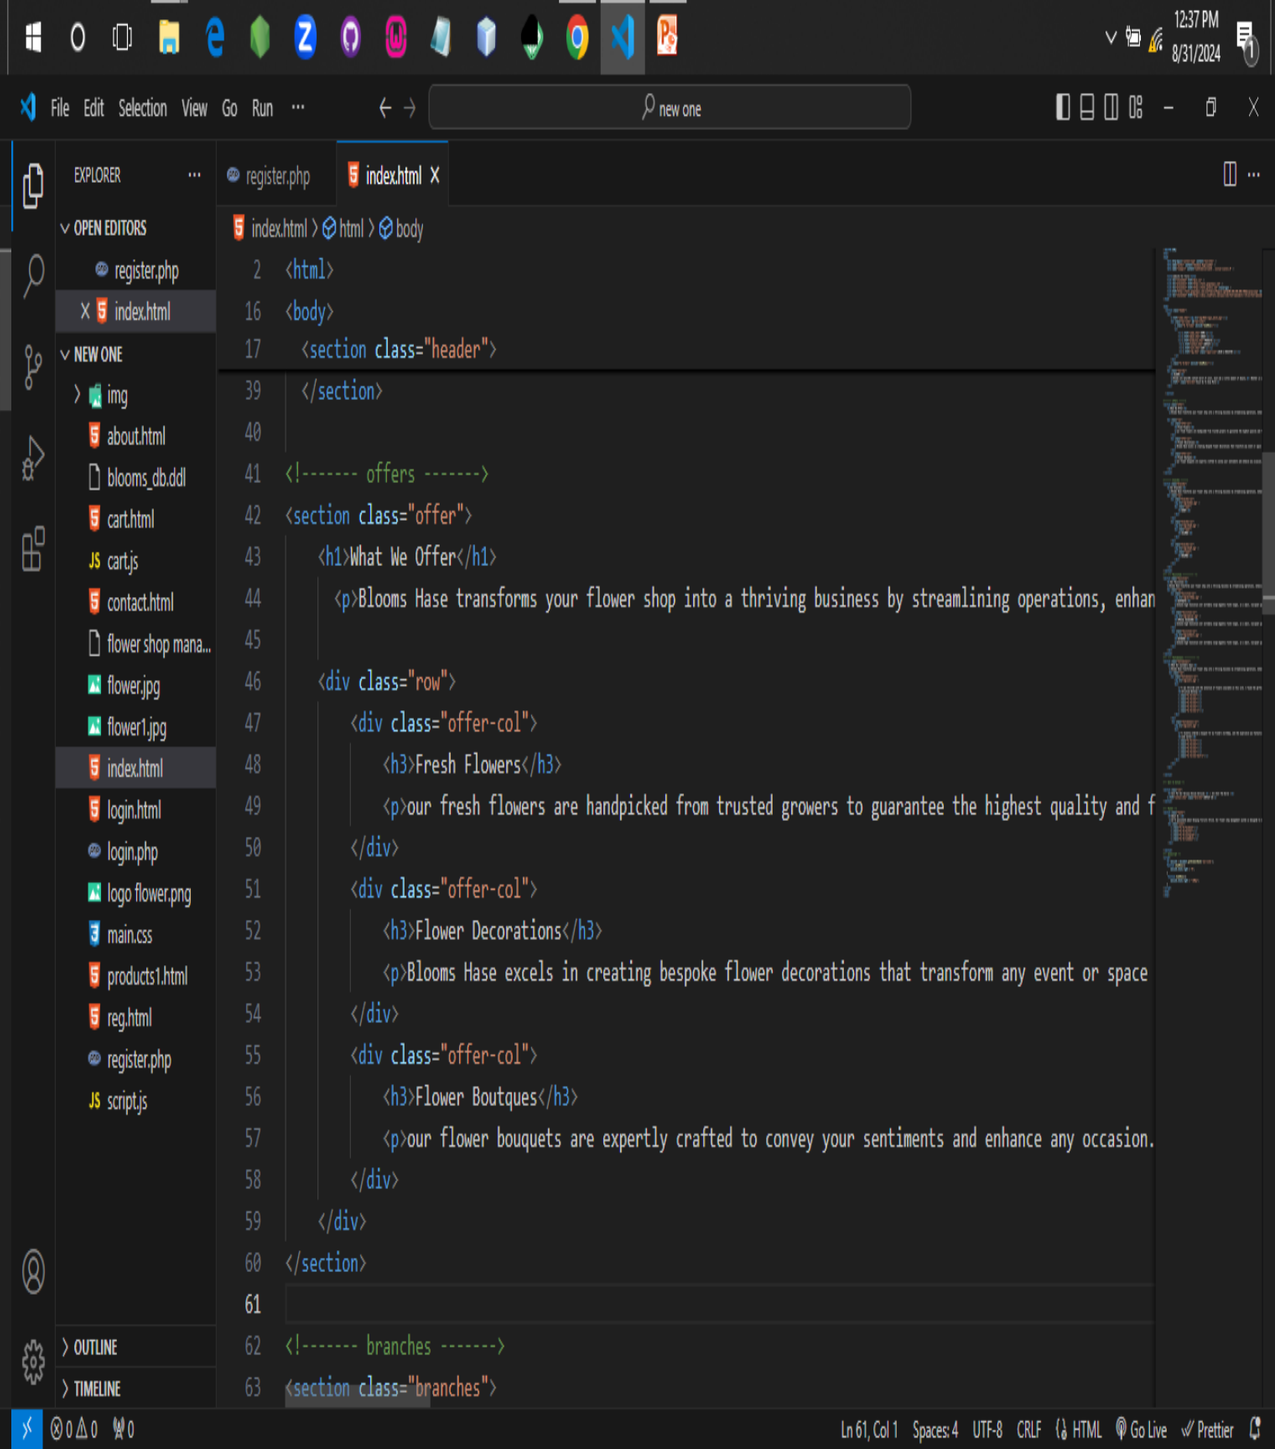

Register and login page developed using PHP

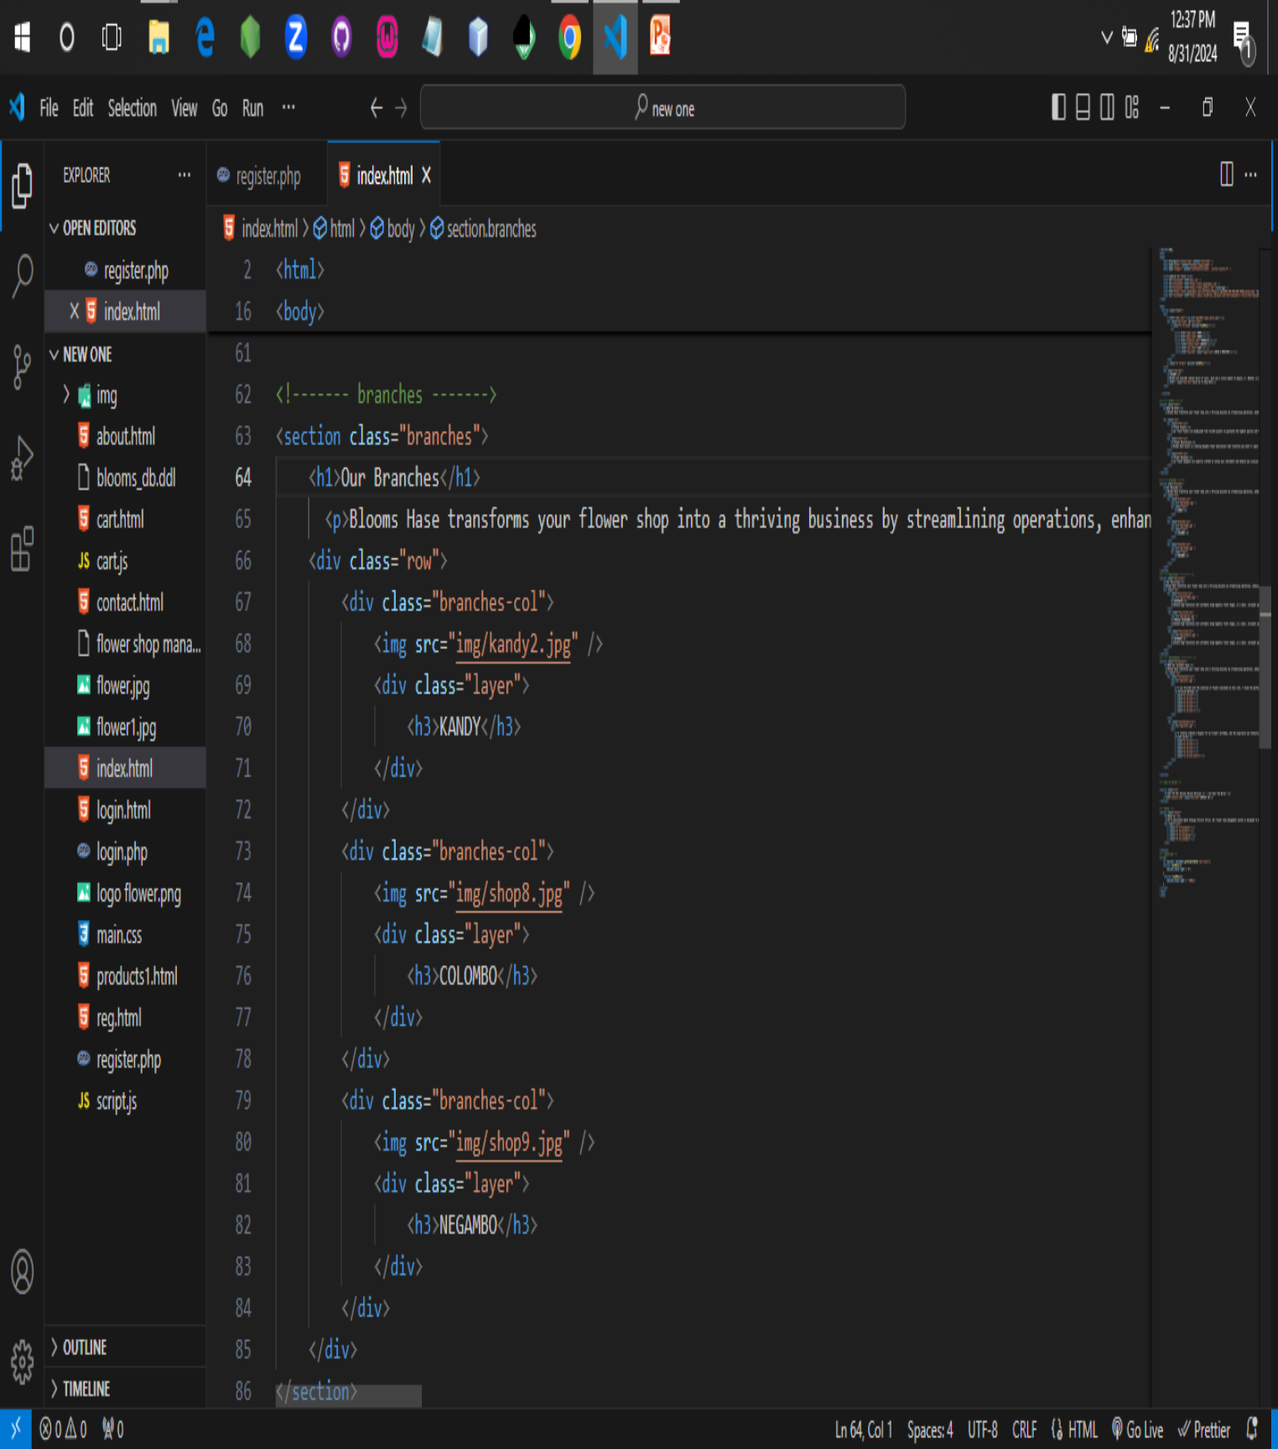

3

Database Development

Database was done by using MySql

Database Overview

Our project is Flower Shop Management System, and the database is the backbone, handling customer orders, inventory, and employee management.

Key entities

- Customer
- Products
- Orders
- Employees

Key Table & Relationships

Relationships are established using foreign keys to maintain data integrity.

- **The Customers Table**

  Stores all relevant customer details, such as names and contact information.

- **The Products Table**

  Manages the inventory, keeping track of product names, descriptions, prices and stock levels.

- **The Orders Table**

  Tracks customer orders, linked to products and customer.

- **The Employees Table**

  Holds data about the staff, including their roles within the shop.

flower shop management database.ddl

```sql
CREATE DATABASE flower_shop_management_database;

USE flower_shop_management_database;

CREATE TABLE login (
    lid VARCHAR(4) PRIMARY KEY,
    username VARCHAR(20),
    password VARCHAR(20)
);

CREATE TABLE Distributor (
    did VARCHAR(4) PRIMARY KEY,
    dname VARCHAR(20),
    dlocation VARCHAR(20),

    FOREIGN KEY (EID) REFERENCES Employee(EID)
);
```

blooms_db.ddl

```sql
CREATE DATABASE blooms_db;

CREATE TABLE users (
    id INT AUTO_INCREMENT PRIMARY KEY,
    full_name VARCHAR(255) NOT NULL,
    email VARCHAR(255) NOT NULL UNIQUE,
    username VARCHAR(255) NOT NULL UNIQUE,
    password VARCHAR(255) NOT NULL
);
```

CSS

Our project utilizes CSS to manage the visual design and enhance user experience.

- **Structure and Layout**

  CSS ensures our website is responsive and visually consistent. We used Flexbox and grid layouts to arrange elements effectively across different devices.

- **Styling and Theme**

  Though CSS, we define the site's color schemes, fonts and spacing. This consistency reinforces the flower shop's brand identity and creates a cohesive look.

- **Interactivity**

  CSS adds interactivity with hover effects and animations, making the site more engaging and user-friendly.

Challenges and Solusions

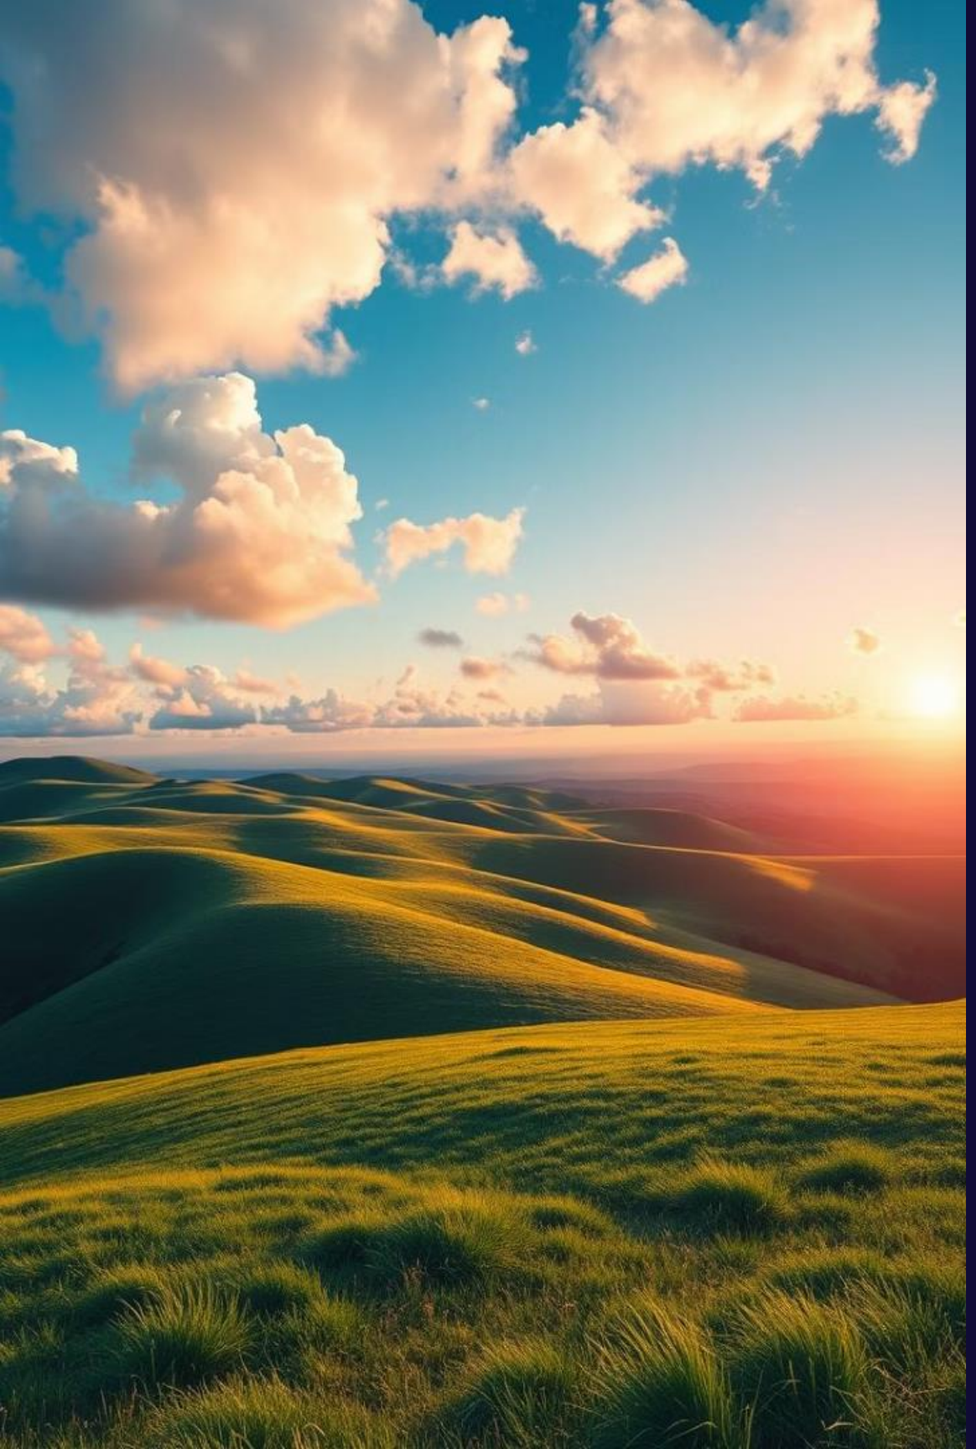

Our database ensure efficient and reliable management of the flower shop, supporting smooth operation and future scalability.

Balancing normalization and performance.

- We normalized the database to avoid redundancy, while indexing was used to maintain query performance.

Ensuring data integrity with complex relationships.

- We used foreign keys and constraints to enforce data consistency.

Thank You for Your Time

We appreciate your time and interest in our presentation. We hope you found the information valuable and insightful.
